EXPERIENCE

Software Engineer II [Internally Promoted] (Full-stack)

Amazon (Performance Evaluations [🔗](#))

June 2020 – Present Seattle, USA & Vancouver, Canada

- Design and build RAG-based, highly available, secure, scalable, distributed Artificial Intelligence systems in a microservices architecture
- Engineer E2E GenAI infrastructures like Chat Bots, Summarisations, Feedback Analysis, coordinating with Applied & Research Scientists
- Own the DevOps during on-calls and maintain the systems based on real-time customer data and demanding service-level agreements
- Learnings: AWS Bedrock, Prompt Engineering, Distributed Computing, CI/CD, Security (AuthZ/N), Architecture & Backend Design, & DevOps

Software Engineer (Cloud & Containerization)

Orbis Investments (Recommendation Letter [🔗](#))

May 2019 – Aug 2019 Vancouver, Canada

- Built a .NET Global C# CLI tool to containerize an organization-wide microservice using Docker for scalability & cost-efficiency.
- Evaluated the impact of deploying the microservice to AWS EKS vs. in-house servers using benchmarked performance and bandwidth tests.
- Learning: Cloud Deployment (AWS & Kubernetes), Containerization (Docker), Frontend Design (Angular), REST APIs, & .NET (C#)

Software Engineer (Embedded Hardware Programming)

Verity Studios (Recommendation Letter [🔗](#))

Jan 2018 – Jul 2018 Zurich, Switzerland

- Developed firmware for a custom hardware platform in C++ to facilitate the downloading of drone flight telemetry logs, ensuring robust data collection and reliability.
- Designed and implemented a multi-layered communication protocol on top of UDP, which resulted in a 99% reduction in end-to-end data corruption during transmission, enhancing data integrity.
- Learning: Async Programming (C++), Protocol Design, Data Analytics (Python), Version Control (Git), & Automation (Jenkins & Cron)

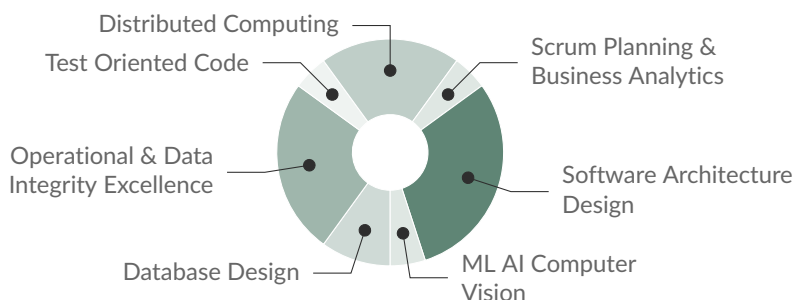

Teaching Assistant (Systematic Program Design)

UBC Computer Science Department (Recommendation Letter [🔗](#))

Sept 2018 – April 2019 Vancouver, Canada

- Mentored 150+ students by providing hands-on guidance in debugging, optimizing algorithms and design patterns, and structuring codebases.

KNOWLEDGE LANDSCAPE

I AM...

"I am a full-stack software engineer with 6+ years of experience building scalable high-performance systems. From a startup in Europe to a corporate environment in North America, I thrive on ownership, optimizing systems, and driving impactful products from concept to deployment."

STRENGTHS

Mentorship

Performance & Scalability

Security & Reliability

Solution Driven Design

DevOps Automation

SCHOLARSHIPS @ UBC

International Leader of Tomorrow [🔗](#)

\$250,000. Extremely selective full ride offered to 20 students per year based on academic and extracurricular achievements.

Trek Academic Excellence [🔗](#)

\$12,000. Scholarship offered to top 5% of undergraduate students.

Dean of Science Honor [🔗](#)

\$5,000. Scholarship offered based on Professor recommendations to Dean's office.

Faculty of Science Honor [🔗](#)

\$10,000. Scholarship offered based on engagement with faculty via research.
